

John Rubino

Senior product designer in New York, designing complex financial products for advisors and building with AI.

Summary

I help financial advisors make better decisions by designing AI-powered wealth management tools that simplify complex workflows. At BNY | Pershing, I redesigned a lending platform that generated \$27M in a single day and led AI adoption for a 3-person team, setting standards across Wealth Services.

Experience

BNY | Pershing | Product Designer · Wealth Services Sep 2023 – Present

- Led the redesign of Fully Paid Lending with design, product, and engineering, partnering with a researcher on 5 studies to learn why advisors had written off a tool that lacked context, made positions hard to find, and lost them at enrollment. Launched to all Introducing Broker-Dealers, generating \$49.9K for firms and their investors, including a \$27M position lent in a single day.
- Selected by design leadership as one of 3 designers leading AI adoption for the Wealth Services design team, setting guidance on AI tooling in designer workflows. Built and presented a learning series on building with our design system in AI tools, plus a team-wide session on Figma MCP and agent customization, and now documenting how designers can pull answers directly from design system guidance to reduce inconsistencies across the product.
- Led the redesign of single order entry screens for alternative investments. Interviewed 8 clients with product to uncover pain points: scattered documents, rekeyed trades, and manual operations checks. Designed a document upload-first approach using AI-assisted data extraction that consolidated the flow into one step and projected a 90% reduction in wire creation errors.
- Co-designed New Account Opening and Asset Movement to reimagine Pershing's wealth platform. Partnered with user research to interview 12 advisors on how they open accounts and move client money. Validated prototypes with 20 advisors across two usability studies, reshaping both flows and revealing a confirmation screen that told advisors an account existed before it did.

Collective Design | Design Advisor 2024 – Present

Advising early-stage startups to improve their products and set strategy.

Purple Panda Rentals | Product Designer & Founder Sep 2020 – Feb 2023

Founded a rental platform for college students after hearing from friends about the struggles of searching for off-campus housing. Surveyed 270 students, designed the mobile app, and used usability testing to raise task completion from 63% to 100%. Reached 100+ sign-ups and increased referrals by 20%.
