Summary

I design end-to-end B2B workflows for advisors at BNY Pershing, including unifying account opening and money movement into one reimagined wealth platform. My lending redesign helped a client lend a $27M position in a single day, and I'm one of three designers leading AI adoption for the Wealth Services design team.

Experience

BNY Pershing | Senior Product Designer, Wealth Services | New York Sep 2023 - Present

- Co-designed New Account Opening and Asset Movement to reimagine Pershing's wealth platform. Partnered with user research to interview **12 advisors** on how they open accounts and move client money, then validated prototypes with **20 advisors** across two usability studies, which reshaped both flows and revealed a confirmation screen telling advisors an account existed before it did.
- Led the redesign of Fully Paid Lending with a design lead, product, and engineering, partnering with a researcher on 5 studies to learn why advisors had written off a tool that lacked context, made positions hard to find, and lost them at enrollment. Launched to all Introducing Broker-Dealers, generating revenue for firms and their investors, including a **$27M position** lent in a single day.
- Selected by design leadership as one of 3 designers leading AI adoption for the Wealth Services design team. Built and presented a learning series on building with our design system in AI tools, and now documenting how designers can pull answers directly from design system guidance.
- Led the redesign of single order entry for alternative investments. Interviewed 8 clients with product to uncover pain points: scattered documents, re-keyed trades, and manual operations checks. Designed a document-upload-first flow with AI-assisted data extraction that consolidated the process into one step, projected to cut wire creation errors by about 90%.

Colllective Design | Design Advisor | New York 2024 - Present

- Advise early-stage startups on product strategy and design.

Purple Panda Rentals | Founder & Product Designer | New York Sep 2020 - Feb 2023

- Founded a rental platform for college students after hearing from friends how hard the off-campus housing search was. Surveyed 270 students, designed the mobile app, and used usability testing to raise task completion from 63% to 100%. Reached 100+ sign-ups and increased referrals by 20%.

Skills

Research & testing: User interviews, Usability testing, Survey design, Research synthesis

Design: Interaction design, Prototyping, Prototyping in code, Design systems (component libraries, documentation), AI product design

Domain: B2B fintech, Advisor platforms, Lending, Account opening & KYC, Alternative investments, 0-to-1 products

Tools: Figma Suite, Claude Code, Devin, Codex
