Summary

I design regulated, data-heavy financial products for advisors at BNY Pershing, working from research through prototype with product and engineering. My lending redesign helped a client lend a $27M position in a single day, and I'm one of three designers leading AI adoption for the Wealth Services design team.

Experience

BNY Pershing | Senior Product Designer, Wealth Services | New York Sep 2023 - Present

- Led the redesign of Fully Paid Lending with a design lead, product, and engineering, partnering with a researcher on **5 studies** to learn why advisors had written off a tool that lacked context, made positions hard to find, and lost them at enrollment. Launched to all Introducing Broker-Dealers, generating revenue for firms and their investors, including a **$27M position** lent in a single day.
- Co-designed New Account Opening and Asset Movement to reimagine Pershing's wealth platform. Partnered with user research to interview 12 advisors on how they open accounts and move client money, then validated prototypes with **20 advisors** across two usability studies, which reshaped both flows and revealed a confirmation screen telling advisors an account existed before it did.
- Led the redesign of single order entry for alternative investments. Interviewed 8 clients with product to uncover pain points: scattered documents, re-keyed trades, and manual operations checks. Designed a document-upload-first flow with AI-assisted data extraction that consolidated the process into one step, projected to cut wire creation errors by about 90%.
- Selected by design leadership as one of 3 designers leading AI adoption for the Wealth Services design team. Built and presented a learning series on building with our design system in AI tools, and now documenting how designers can pull answers directly from design system guidance.

Colllective Design | Design Advisor | New York 2024 - Present

- Advise early-stage startups on product strategy and design.

Purple Panda Rentals | Founder & Product Designer | New York Sep 2020 - Feb 2023

- Founded a rental platform for college students after hearing from friends how hard the off-campus housing search was. Surveyed 270 students, designed the mobile app, and used usability testing to raise task completion from 63% to 100%. Reached 100+ sign-ups and increased referrals by 20%.

Skills

Research & testing: User interviews, Usability testing, Survey design, Research synthesis

Design: Interaction design, Prototyping, Design systems (component libraries, documentation), AI product design, Design-to-engineering handoff

Domain: Advisor platforms, Regulated workflows (KYC, subscription documents), Lending, Account opening & KYC, Alternative investments, 0-to-1 products

Tools: Figma Suite, Claude Code, Devin, Codex

Education

College of Staten Island | B.A. Music Technology | 2014 - 2019

Designlab UX Academy | UX/UI Design Certificate, 440 hours | 2022

Emeritus | Designing and Building AI Products and Services | 2024

Hustle Fund | Venture Fellowship | 2026
